

Sub C'  
B1

1. (Twice Amended) A system for assigning object identifiers, comprising:

a global positioning system (GPS) receiver for providing location and time information;  
an identification generator that generates a unique identifier, wherein the identifier includes the provided location and time information in an encoded format; and  
a system for assigning the identifier to an object located proximate the GPS receiver, wherein the object comprises an electronic commerce purchase.

6. (Twice Amended) A program product stored on a recordable medium for assigning object identifiers, the program product comprising:

B2

means for receiving location and time information from a global positioning system (GPS) receiver;

means for generating a unique identifier, wherein the identifier includes the received location and time information in an encoded format; and

means for outputting the identifier in a format suitable for tagging an object located proximate the GPS receiver, wherein the object comprises a network login.

7. (Twice Amended) The program product of claim 6, further comprising means for processing simultaneous network logins that occur at a common location.

9. (Twice Amended) A system for processing object identifiers in the Internet, comprising:

a database for holding objects;

B3  
at least one identification system for providing unique identifiers for objects, wherein the identification system obtains location and time information from a global positioning system (GPS) and encodes the location and time information into each unique identifier; and

an application for processing the objects, wherein the application includes a system for processing the unique identifier, and wherein the objects comprise one of computer hardware devices, network logins, and electronic commerce purchases.

B4  
12. (Twice Amended) The system of claim 11, wherein the objects comprise network logins and the time checking system compares a time difference between network logins.

B5  
18. (Twice Amended) The system of claim 9, wherein the objects comprise electronic commerce purchases, and the application validates each electronic commerce purchase.
